SUMMARY

Product professional with 12 years building payments and checkout products at PayPal, turning ambiguous business and technical problems into PRDs, roadmaps and experiments. Delivered a 10% lift in mobile checkout conversion, 10x fewer failed-payment incidents, and a zero-downtime migration of 40M+ daily API calls. Targeting Senior PM roles in payments, subscriptions and merchant platforms.

EXPERIENCE

PayPal — Technical Product Manager · Checkout Bengaluru · Sep 2021 – Nov 2025
Owned product direction for mobile checkout and subscriptions, leading a squad of 15+ engineers.

- **10% lift in mobile checkout conversion** — set the strategy for native checkout screens, owned the PRD and roadmap, and designed the experiments that measured impact on mobile flows.
- **10x fewer failed-payment incidents** — identified a reliability gap silently failing customer payments during database maintenance, then prioritized and led a cache-bridge fix that raised Billing Agreement reliability from 99.99% to 99.999%.
- **40M+ daily API calls migrated with zero downtime** — self-initiated a legacy monolith deprecation, aligned 10+ upstream teams on migration timelines, and sequenced cutover by merchant risk.
- **~200 merchants migrated off a subscriptions API with zero escalations** — chose the replacement path by trading off merchant effort against long-term platform value, then led segmentation, sequencing and migration comms.

PayPal — Software Engineer 3 · QR Payments San Jose · Jan 2020 – Sep 2021
Shaped product decisions for QR payment acceptance, including the Venmo payer-network expansion.

- Shaped product scope and sequencing for PayPal QR payments, translating feasibility into roadmap commitments.
- Built seller-side risk policy checks into QR acceptance, balancing fraud controls with checkout friction.
- Enabled Venmo-to-PayPal QR payments, expanding PayPal's merchant payer network.

PayPal — Software Engineer 1-2 · Incentives Bengaluru / San Jose · Jul 2014 – Jan 2020
Shipped an offers platform serving millions of users and led a zero-disruption eBay Gift Cards migration.

- Built a batch offers platform serving millions of users via high-volume file uploads.
- Owned the eBay Gift Cards migration post-split, with zero customer-facing disruption.

INDEPENDENT PRODUCT WORKS

Smart Retry & Recovery · Payments Product Spec [View case study ↗](#)

- Most platforms retry every failed recurring payment on the same fixed schedule, wasting capped retries across UPI AutoPay, card e-mandate and NACH.
- Designed a prevent → classify → retry → recover framework that retries only 3 of 7 failure classes; modeled ₹36–81L annual recovery for one 50k-subscriber merchant.

Decline Decoder · AI Product · Live Prototype [View case study ↗](#)

- Diagnoses single declines into a root cause, retry decision and message, and surfaces batch patterns (only ₹10K of ₹61K worth retrying in a sample).
- Built eval-first: 50 dev scenarios, plus 10 kept as a blind holdout. The hybrid lookup + LLM hit 98% and 100% accuracy respectively, with zero hallucinations (LLM alone: 70–74%).

Payments API Deprecation Playbook · Platform Strategy [View case study ↗](#)

- Six-step model (assess → segment → choose path → migrate → measure → sunset) for retiring a live payments API without failed payments or merchant churn.
- In an 800-merchant worked example, 18 merchants carried 78% of TPV, which is why the model segments merchants before setting any sunset date.

EDUCATION

B.Tech, Information Technology — Vellore Institute of Technology · GPA 9.10/10 Vellore · 2010 – 2014

SKILLS

Product	PRD Authorship, Roadmap Ownership, Prioritisation, Feature Scoping, Trade-off Framing, Platform Migration Strategy, Deprecation & Sunset Planning
Data & Experimentation	A/B Testing, Experiment Design, Funnel Analysis, Metric Definition, Instrumentation, Cohort Analysis, SQL
Design & Collaboration	Checkout & Merchant UX, User Flow Mapping, Design Partnership, Cross-functional Squad Delivery, Agile Ceremonies
AI & Tech Domain	LLM Application Design, Prompt Engineering, Evaluation & Guardrails, Payments, Recurring Billing & Subscriptions, UPI AutoPay & E-Mandates, Distributed Systems, API Design & Deprecation, Java
Leadership	Led 8+ engineers, Mentoring, Code & Design Review Ownership, Agile Delivery, Self-initiated Product Bets
Stakeholder Mgmt	Cross-team Negotiation (10+ teams), Merchant Communications, Executive Updates, Migration Comms, Risk & Compliance Partnership
